Report on - DJANGO - Full Stack Web Development Workshop

Title: DJANGO - Full Stack Web Development Workshop
Date: 05th March & 06th March 2026
Time: 09 AM to 05 PM
Venue: BMS Seminar Hall (D Wing, 3rd Floor)

Target Audience: Open for All

No. of Participants Present: 103

No. of Girl Participants Present: 52

No. of Boy Participants Present: 50

No. of IEEE DBIT Members: 21
No. of Non IEEE DBIT Members: 81

Resource Person: Mr. Shripad Kulkarni

Organization of Resource Person: Go Digital Technology Consulting LLP
Organizing Department / Committee / Authority: IEEE - DBIT CS
Faculty Coordinator: Mr. Tayyabali Sayyad
Objectives:

- To introduce students to full-stack web development using the Django framework.
- To develop a clear understanding of backend logic, databases, and frontend integration in web applications.
- To provide hands-on experience in building real-world web applications within a limited time.
- To prepare students for hackathon environments by teaching best practices and common development challenges.
- To encourage teamwork, collaboration, and problem-solving skills through mini-project activities.

Outcomes:

- Participants gained practical knowledge of Django and full-stack web development concepts.
- Students learned how to design and develop web applications using models, views, templates, and databases.
- Participants developed the ability to build and present a working project based on real-world problem statements.
- Students improved their team collaboration, debugging, and project development skills through hands-on activities.
- Participants understood hackathon strategies such as idea selection, time management, and project presentation.

Detailed Report:

The **Full-Stack Django Web Development Workshop**, an intensive and highly successful technical program, was **organized by the IEEE DBIT Computer Society Chapter in collaboration with Colosseum 2026**. Spanning two full days on March 5th and 6th, 2026, the event was conducted at the BMS Seminar Hall. The workshop followed a rigorous schedule, running from 11:00 AM to 5:00 PM on day one (5th March 2026) and 9:30 AM to 4 PM on day two (6th March 2026) to ensure a comprehensive deep dive into the world of web architecture. This multidisciplinary initiative was **open to students across all four years and all engineering branches**, sparking a unique collaborative energy among the 89 registered students. With over **72** participants maintaining active attendance throughout the demanding two-day schedule, the event successfully bridged the gap between academic theory and industry-standard application.

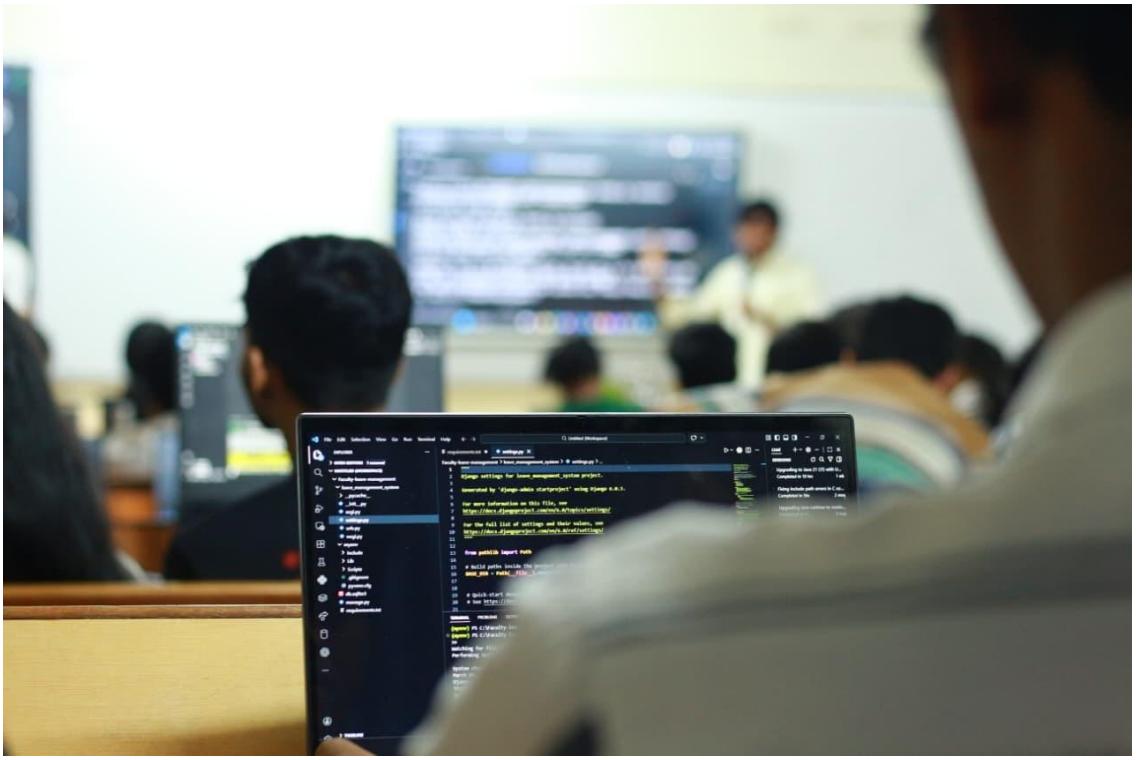

The first day of the workshop was spearheaded by an external expert, Shripad Kulkarni, who laid the foundational groundwork for modern web development. His session focused on the core components of the Django framework, a high-level Python tool used for building real-world, scalable applications. On the second day, the momentum continued with a transition to internal leadership, as the session was conducted by a talented team of student speakers : Shariya Ansari, Smruti Alegaonkar, Deviprasad Shetty, Sanket Jadhav, and Anay Deshpande. These speakers guided participants through the practical nuances of building a full-stack website, emphasizing internship-ready skills and project-based learning.

Beyond delivering insightful sessions, our speakers and volunteers were actively involved in decoding and debugging errors, ensuring that every participant received hands-on support. This crucial effort was coordinated by Smruti Alegaonkar (Chairperson, IEEE-DBIT CS Chapter) and Jaeden Pereira (Vice-Chairperson, IEEE-DBIT CS Chapter), who streamlined the troubleshooting process and enabled smooth progress for all attendees. Their combined dedication across both days of the workshop not only strengthened participant's technical confidence but also fostered a collaborative environment where problem-solving and peer learning thrived.

A standout feature of the two-day curriculum was the emphasis on hackathon-style development. Students were mentored by IEEE-DBIT CS Faculty Coordinator - Mr Tayyabali Sayyad on how to collaborate in small teams, rapidly prototype ideas, and effectively pitch their final products to receive expert feedback. This hands-on approach ensured that participants moved beyond conceptual understanding to practical mastery, resulting in showcase-worthy projects and certificates that validated their technical growth. The workshop reached its formal conclusion with a gracious vote of thanks delivered by Sanket Prajapati (Chairperson, IEEE-DBIT), who acknowledged the hard work of the speakers, the organizing committee, and the enthusiasm of the attendees.

Feedback Analysis:

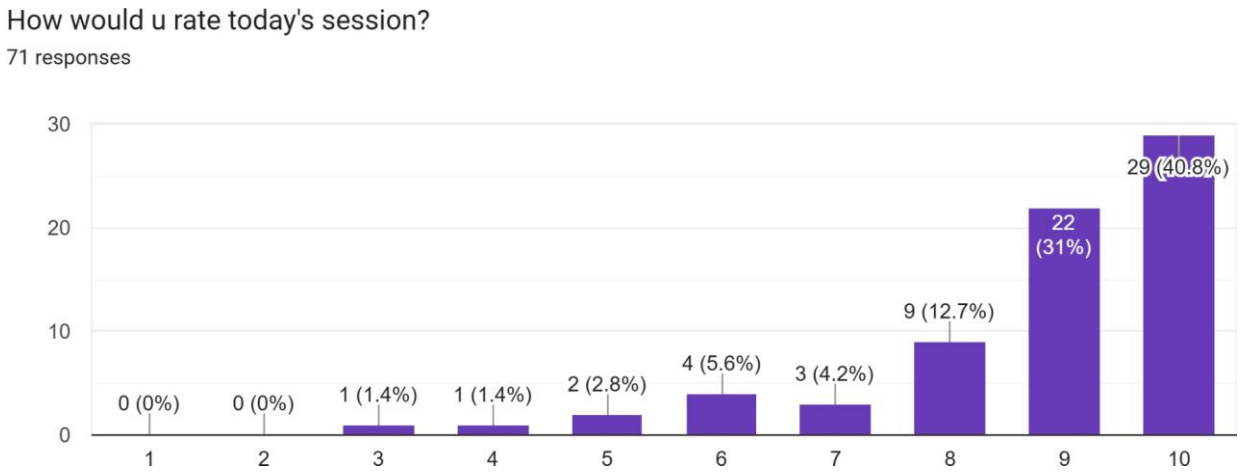

Day 1

The Django workshop feedback paints a very positive picture, with an **average rating of 8.5/10** and strong qualitative insights from participants. Many praised the clarity of concept explanation, describing the sessions as *good*, *awesome*, and *well-explained*, while others suggested improvements such as *more detailed code walkthroughs*, *better time management*, and a slightly *swifter pace*. Importantly, the feedback highlights that participants felt supported throughout, with speakers and volunteers actively helping them debug and decode errors.

From a participation perspective, the workshop achieved balanced gender involvement, with **female students slightly outnumbering male students**, reflecting inclusive engagement. Branch-wise, Computer Engineering **(COMPS) students formed the largest group**, while Electronics & Telecommunication (EXTC) students also participated in large numbers. Information Technology (IT) students contributed meaningfully as well, particularly with feedback on code explanation depth. Year-wise, **First-Year (FE) students dominated attendance**, showing strong enthusiasm from beginners, while Second-Year (SE) students added constructive feedback, and a handful of Third-Year (TE) students brought advanced perspectives.

Day 2

The Day-2 Django workshop feedback reflects a very positive response from participants, with an **average rating of around 9/10**. A majority of students rated the session 9 or 10, indicating high satisfaction with both the content and the delivery. Many participants appreciated the clear explanation of concepts and the structured approach of the session, describing it as *informative, engaging, and easy to understand*. Comments such as *"Very good session, good understanding," "Nice experience,"* and *"The session was nice"* highlight that students found the workshop helpful in learning the fundamentals of Django and gaining practical exposure to web development.

While the overall response was highly encouraging, some students also provided constructive suggestions for improvement. A few participants recommended increasing the amount of hands-on coding practice so that students can implement concepts more actively rather than simply following along. Others suggested covering additional topics such as project deployment and integrations like OpenCV, which could help them understand real-world applications of Django. In terms of participation, **First-Year (FE) students formed the majority of attendees**, showing strong interest from beginners, while Second-Year (SE) and Third-Year (TE) students also contributed valuable feedback. Branch-wise, **Computer Engineering (COMPS) students represented the largest group, followed by Electronics and Telecommunication (EXTC) and Information Technology (IT)** students, demonstrating wide engagement across departments.
