# Report on - Secure Secrets Management for Modern Applications

**Title:** Secure Secrets Management for Modern Applications
**Date:** 26th July, 2026
**Time:** 03 PM to 05 PM
**Venue:** Online

**Target Audience:** Open for All

**No. of Participants Present:** 18

**No. of Girl Participants Present:** 13

**No. of Boy Participants Present:** 5

**Organizing Department / Committee / Authority:** IEEE – CS
**Faculty Coordinator:** Mr. Tayyabali Sayyad

**Objectives:**

- To understand fundamental concepts of application security and common vulnerabilities
- To learn secure coding practices for developing robust and attack-resistant applications.
- To introduce authentication, authorization, and data protection techniques in modern applications.

**Outcomes:**

- Participants will be able to identify and mitigate common security vulnerabilities in applications.
- Participants will gain practical knowledge of implementing secure authentication and data protection methods.
- Participants will be equipped to design and develop applications with a security-first approach.

**Detailed Report:**

The IEEE Computer Society student chapter at IEEE DBIT successfully organized an insightful technical workshop titled "Secure Applications" on 26th July 2026 from 3:00 PM to 5:00 PM in online mode. The session aimed at spreading awareness about application security and best practices among students in an increasingly digital world.

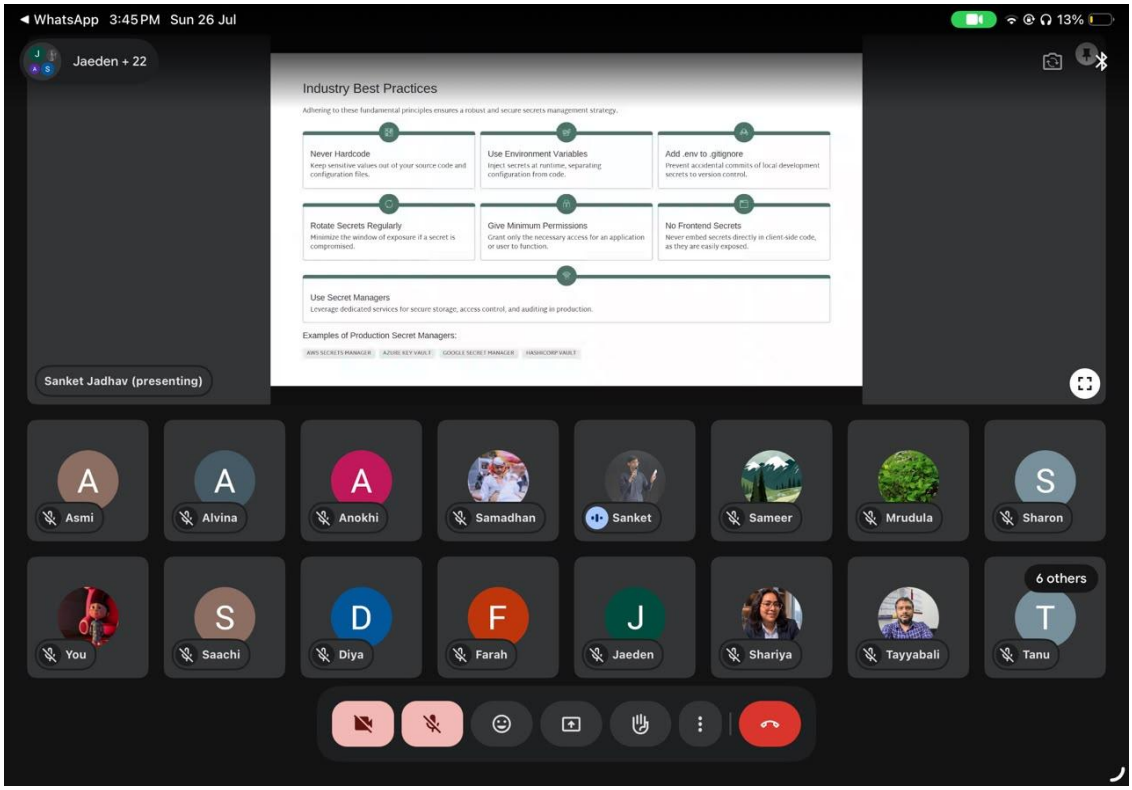

The workshop was coordinated by Smruti A. (Chairperson) and Jaeden P. (Vice-Chairperson) of IEEE DBIT Computer Society. A total of 18 participants attended the session, reflecting a focused and interactive learning environment.

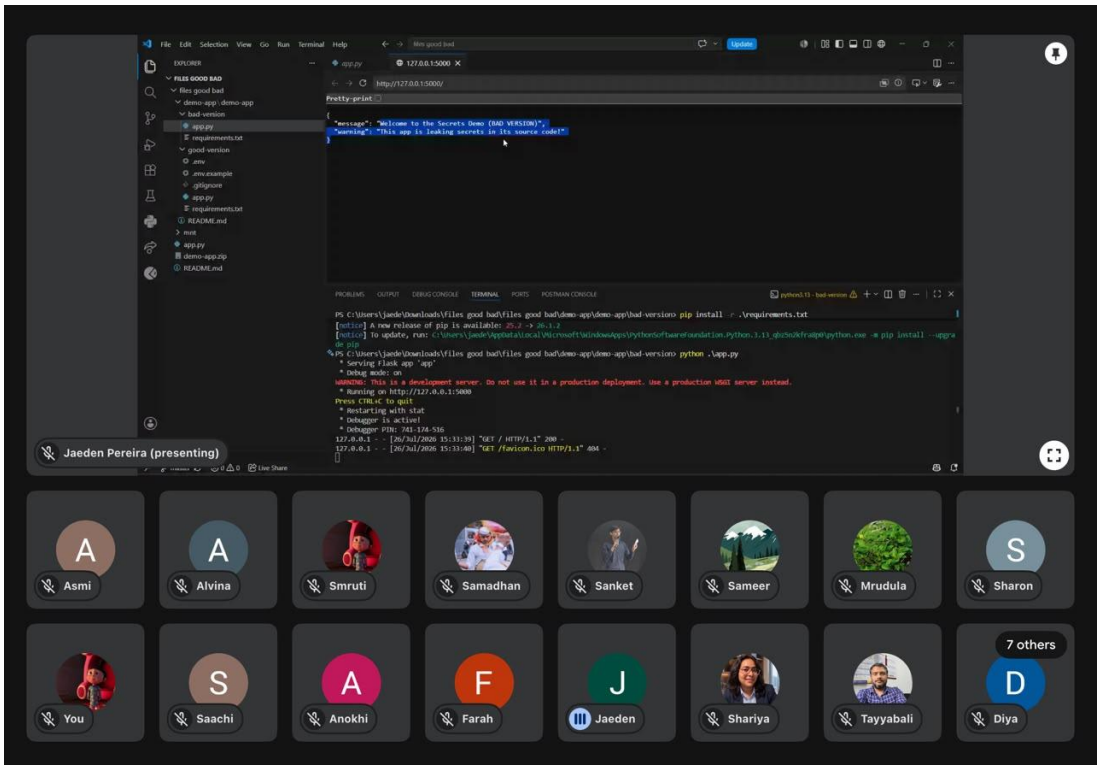

The session covered several crucial topics related to modern application security. Participants were introduced to the risks of hardcoded API keys, emphasizing why sensitive credentials should never be exposed in source code. The workshop further explored Cloud, Git, and GitHub security, highlighting best practices for maintaining secure repositories and protecting cloud-based resources. Additionally, the importance of secure environment variables (.env files) was discussed, along with how industries manage sensitive data efficiently. The session also included insights into industry best practices followed by modern software companies, bridging the gap between academic knowledge and real-world implementation.

The workshop was designed to be beginner-friendly while still offering practical insights, making it beneficial for students across different levels. Participants gained a clear understanding of secure coding principles and the importance of integrating security into the development lifecycle.

Overall, the event was successfully conducted, achieving its objective of enhancing awareness about secure application development. The coordination by the IEEE CS team and the active participation of attendees contributed to making the workshop informative and impactful.

## Snapshot of the Event:

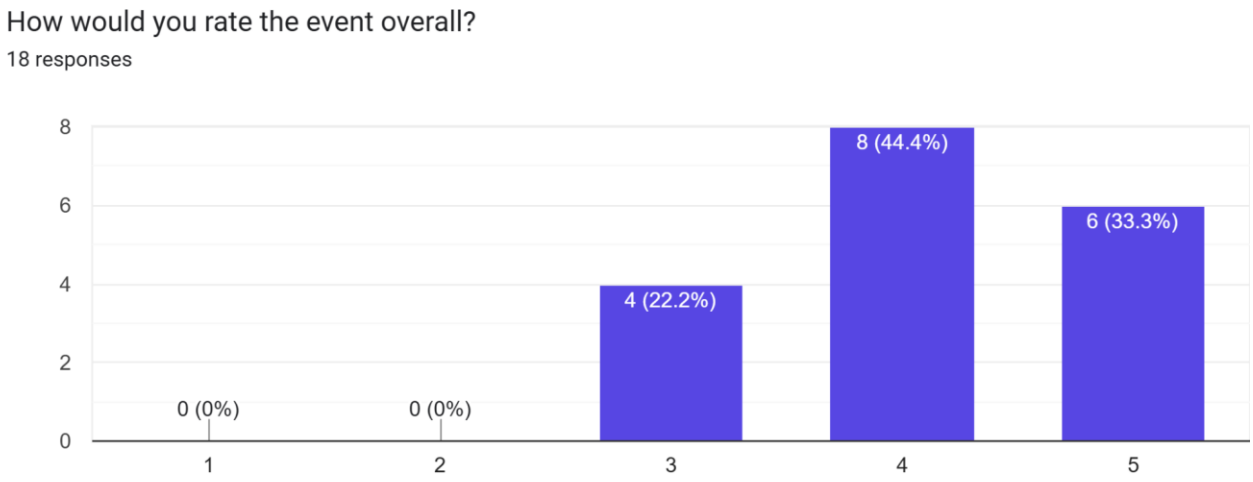

**Feedback Analysis:**

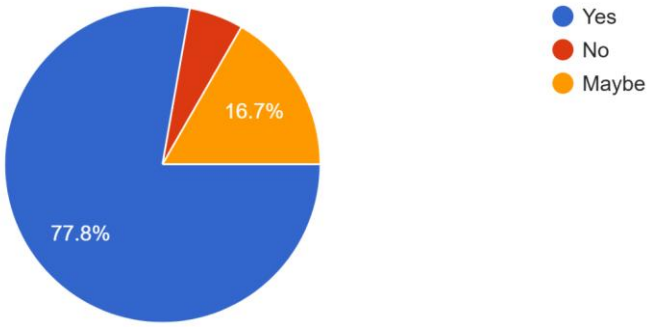

The IEEE cybersecurity event received a positive overall response, with an average rating of 4.11 out of 5, indicating good participant satisfaction. Most attendees were from SE (88.9%) and primarily from COMPS (44.4%) and IT (38.9%) branches, showing strong interest from tech-focused students. A significant majority (77.8%) expressed interest in attending more cybersecurity sessions, highlighting high engagement and relevance of the topic. Participants showed interest in advanced areas such as AI in cybersecurity, ethical hacking, cloud security, and API security.

Feedback suggests that while the session was informative, improvements can be made by incorporating more hands-on activities, slowing down the pace, and explaining basic concepts more clearly for beginners, which would enhance overall understanding and effectiveness of future workshops.

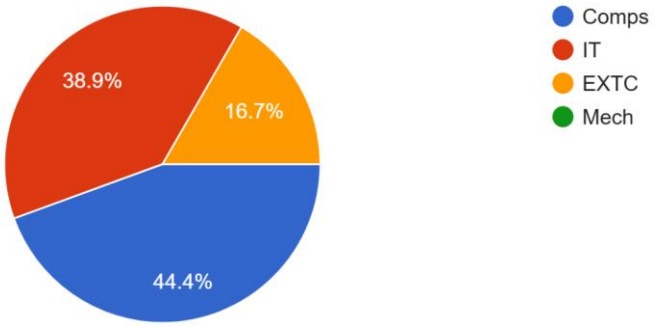

Additionally, the feedback responses indicate that while participants appreciated the content and delivery, there is a clear demand for more interactive and practical learning experiences. Many respondents suggested incorporating live demonstrations, hands-on sessions, and real-time examples to better understand complex cybersecurity concepts. Improving the structure by starting with fundamental topics before moving to advanced concepts would help students from non-technical backgrounds. Overall, the feedback reflects a strong foundation for future events, with clear direction toward making sessions more engaging, application-oriented, and inclusive for all branches.

Would you like more cybersecurity sessions on similar topics?

**Registration Details:**

No. of Students Registered: 45
Girls: 19
Boys: 26

**Details of the Attendees:**

**No of Students Attended:** 18

| S. No. | Name | Branch |
|---|---|---|
| 1 | Saachi Kulkarni | Comps |
| 2 | Tanvi Hadavale | Comps |
| 3 | Atharva Satappa Patil | EXTC |
| 4 | Rohit Kumar | EXTC |
| 5 | Dipti nirmal | IT |
| 6 | Ishant Bollu | IT |
| 7 | Samadhan Appasaheb Garale | IT |
| 8 | Alvina Goves | Comps |
| 9 | Anokhi Kanade | Comps |
| 10 | Asmi Kadam | IT |
| 11 | Shrushti Benke | Comps |
| 12 | Rhea Sequeira | Comps |
| 13 | Mrudula Sonawane | IT |
| 14 | Sameer Mhapsekar | IT |
| 15 | Dipti nirmal | IT |
| 16 | Sharon Alphonso | Comps |
| 17 | Renuka Gite | Comps |
| 18 | Chaudhary Farah Amjad | EXTC |
